

ProjectStore Solution Overview:

- 100% Web-based password protected system; no software to install
- Any document can be uploaded into Project Store and viewed with only a Web browser
- Project and folder subdirectories allow colleagues to view data specifically related to their area of responsibility
- Automatic email notification to participants for all project activity
- Built-in Digital Signatures
- ProjectStore Public option allows access to documents without the need of a password
- Prints to any printer or plotter
- Easy to learn and operate
- 128-bit encryption
- 24/7/365 customer service and support

ProjectStore has commercial applications in:

- Construction
- Architectural Services
- Engineering & Design
- Automotive
- Tool & Die
- Research & Development
- 3-D Design
- Municipal Government

ProjectStore ensures all participants on a project stay connected

Ensuring owners, contractors, sub-contractors, vendors and others stay connected and informed throughout the entire project duration is crucial to a project's success.

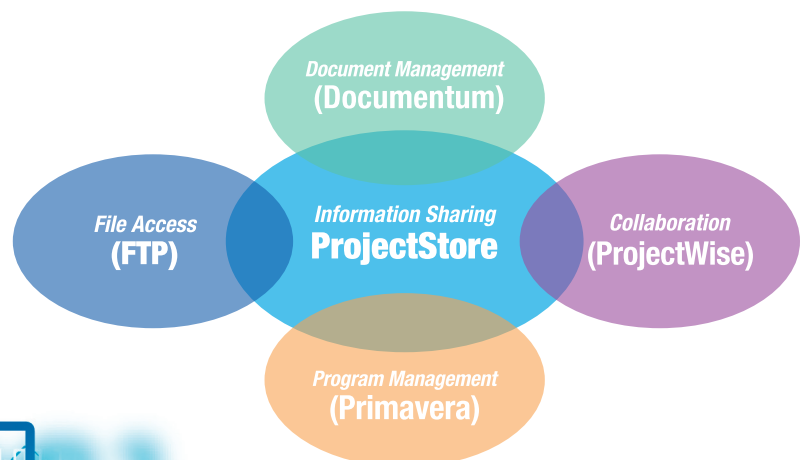

The solution is ProjectStore from Copper Range.

ProjectStore is a Web-based information sharing and dissemination system that provides electronic access to all the information required to manage a project wherever and whenever needed. Drawings, specifications, RFIs, submittals, purchase orders, 3-D data sets and more can all be stored and accessed by any authorized project participant using only a Web browser, enabling real-time notification of updates, change orders and more.

ProjectStore can be tailored to fit your needs, providing the most essential features and functionality of file access, document management, collaboration, and program management applications – all in one easy-to-use package. Quickly, simply, cost effectively.

Reducing the Friction of Data Exchange

Copper Range

Operational Benefits:

- Documents remain in digital form, eliminating the need for expensive scanners and permitting document access anytime, anywhere
- Contractors choose only the information they require, significantly reducing printing costs
- Faster drawing and change order approval, resulting in faster payment of retainer fees
- Increases traffic to your website by creating a digital plan room for your users
- Built-in Digital Signatures let you turn contracts around in seconds
- Far less expensive and better accessibility when compared to FTP sites
- Offers choice of printing destinations
- Keeps everyone in the loop and increases competition during bidding
- Digital information is stored on servers, not expensive off-site facilities
- Help is available around the clock
- Minimal training required
- Ensures data security and protection
- The choice of who has access to your project information is all YOURS

About Copper Range

Copper Range Inc. specializes in developing data exchange solutions using the latest computer, Internet, cellular and communications technologies. Our middleware solutions operate independently of any one system's specific limitations and reduce the friction often encountered with data exchange. We also develop the appropriate interfaces, reports and views of the data, as well as hosting and managing the solution.

Our innovation, experience and technology allow companies to more efficiently communicate, collaborate and disseminate data across platforms, across industries, across town and around the world. Quickly. Easily. Cost-effectively.
